Summary

A motivated and ambitious professional eager to start a career in IT as a Junior QA Engineer. I have a strong theoretical foundation in software testing and a keen desire to apply it in practical settings. I am proficient in test design techniques and have hands-on experience creating test documentation. I am skilled in working with APIs (Fiddler, Postman) and databases (MySQL, MongoDB). I have programming knowledge in Python and a basic understanding of QA automation. I have experience administering remote servers based on Windows and Linux and working with VMware Workstation virtual machines. I have held leadership positions, developing and implementing CRM systems based on Google Sheets, creating new business directions, and training specialists.

I value honesty, intelligence, and responsibility in myself and others. I am eager to continue growing in a dynamic IT environment.

Technical Skills

Tools and Technologies

- Confluence, Jira, TestRail
- REST API, Postman, Fiddler
- Chrome DevTools
- HTML & CSS
- XML, JSON
- Google Docs
- Selenium IDE
- MySQL Workbench
- MongoDB Compass
- Visual Studio Code
- Git, GitHub, GitLab
- Python

Test Documentation

- Test Plan
- Test Suites
- Test Cases
- Checklists
- Bug Reports
- Test Reports

Operating systems

- Microsoft Windows
- Android OS
- Linux

Education

- Self-taught software testing theory using the ISTQB syllabus, online resources, and YouTube channels; since summer 2024.
- Self-taught Python programming through programming books, online tutorials, and specialized resources; since 2023.
- Kyiv National University of Construction and Architecture, 2005: Master's degree, Project Management.

Soft Skills

- Strong analytical skills
- Detail-oriented
- Quick learner
- Teamwork
- Self-organized
- Highly responsible
